Professional Summary

AI Lead with 5+ years of experience leading teams in the design and deployment of multi-tenant enterprise AI platforms, predictive analytics, and computer vision systems. Expertise in building role-scoped LLM agents under unified single sign-on (SSO) and robust multi-tenant control planes. Guided by a design philosophy of high-reusability tenant architecture and deterministic, grounded generation, consistently delivering end-to-end operational automation and production analytics across diverse business segments

Academic Qualifications

In Progress	MS Artificial Intelligence	FAST-NUCES, Karachi	
2023	BS Computer Science	Bahria University	CGPA: 3.6
2018	Intermediate	Punjab College	A1 Grade

Relevant Coursework

Object-Oriented Programming, Data Structures & Algorithms, Operating Systems, Database Management Systems, Software Engineering, Computer Networks, Artificial Intelligence, Information Security and Web development

Professional Experience

AI Lead & Data Scientist

Aug 2024 - Present

Poulta, Inc.

Karachi, Pakistan (Remote)

- Directed the design and delivery of the AI platform: authored the backend and multi-agent architecture, led a team of 5, chaired architecture reviews, and presented to the CEO, leadership, and board.
- Designed a role-scoped multi-agent LLM layer, auto-scoped by the org tree, governed by a deterministic scope guard so agents narrate only real, tool-computed figures.
- Developed internal agents that automate HR, procurement, and marketing workflows, routing requests, drafting documents, and consolidating departmental reporting.
- Built a multi-tenant control plane that provisions each company as an isolated cell with its own database, and reducing onboarding.
- Modeled live bird weight from images using computer vision, automating a manual sampling process.
- Devised the AI gateway with a fallback chain so an AI incident degrades the assistant without interrupting dashboards, data, or alerting.
- Implemented PII redaction, append-only audit logging, SSO with two-factor sign-in, and role-based access enforced server-side.
- Forecasted performance with predictive models and built 10+ interactive Qlik Sense dashboards translating production data into actionable insights.
- Consolidated large datasets from multiple source systems through cloud data workflows and utilized SQL for extraction, transformation, and analysis.

AI/ML Engineer

Feb 2025 - Oct 2025

MID Construction

USA (Remote)

- Developed and deployed 5+ computer vision models for real-time hazard detection on construction sites using YOLO and deep learning.
- Constructed image and video processing pipelines to monitor safety compliance and detect anomalies from site surveillance data.
- Delivered AI models into working applications using FastAPI for backend services and Streamlit for interactive dashboards and demos.
- Improved site safety by automating risk detection and alerting, reducing response time and manual monitoring effort.

Digital Marketing Head

Jan 2025 - Present

ZKAAH Organics

Karachi, Pakistan

- Directed branding and product packaging for 7+ products, shaped social media strategy, and built and maintained the company website.
- Oversaw online sales and e-commerce operations, monitoring performance and implementing strategies that increased revenue.

Data Science | Web Developer | Graphic Design

Jan 2019 - Jan 2024

Freelance

- Completed Data Science and Machine Learning projects in Python using Pandas, NumPy, Scikit-learn, and Matplotlib.
- Designed and developed modern, responsive websites using HTML, CSS, JavaScript, and modern frameworks.
- Produced graphic design work for branding and built Digital Logic Design (DLD) projects.

Major Projects

- **Multi-Tenant Multi-Agent AI Platform (Agentic AI):** architecture owner. Role-scoped LLM agents answer operational questions and automate routine multi-step workflows across multiple business segments, behind one login and a control plane over isolated per-company cells, with grounded tools, PII redaction, and full audit.
- **Internal Automation Agents (HR, Procurement, Marketing):** departmental agents that automate recurring internal workflows, routing and screening requests, drafting documents, and consolidating reporting across teams.
- **Livestock Weight Estimation (Computer Vision):** vision model estimating live bird weight from images, automating manual sample weighing and delivering consistent measurement.
- **Hazard Detection System (Computer Vision):** real-time system using YOLO and deep learning to detect safety hazards from live video feeds and raise automated alerts, served via FastAPI and Streamlit.
- **Age Estimation System (ML):** deep-learning model predicting a person’s age from facial images, covering preprocessing, training, and evaluation in Python.
- **Hurdle Avoiding Four-Wheel Bot (Final Year Project):** autonomous four-wheel robot avoiding obstacles in real time using a neural network trained on sensor data.
- **Additional builds:** forecasting models for performance analysis; full-stack e-commerce website; and desktop Pharmacy and Hospital Management Systems backed by relational databases.

Technical Skills

- | | | | | |
|-----------------------|--------------------------|-------------------|-----------------|---------------|
| • Multi-Agent Systems | • LLM Agents | • Qlik Sense | • KPI Reporting | • Python |
| • Prompt Scoping | • Grounded Generation | • Amazon Bedrock | • FastAPI | • AWS |
| • Multi-Tenancy | • RBAC / SSO | • PII Redaction | • SQL | • MongoDB |
| • Machine Learning | • Deep Learning | • Computer Vision | • Scikit-Learn | • Forecasting |
| • Agent Orchestration | • ETL / Data Integration | • Audit Logging | • Tableau | • N8n |
