Professional Summary

AI Lead who owns the backend and multi-agent architecture of a multi-tenant enterprise AI platform — role-scoped LLM agents behind single sign-on, serving multiple business segments. Built on two principles: build once and reuse per tenant, and grounded agents that never invent a figure, with every number computed in code. Backed by 5+ years in data science, BI, and computer vision across forecasting models, YOLO-based detection, and Qlik Sense dashboards on live production data.

Academic Qualifications

In Progress	MS Artificial Intelligence	FAST-NUCES, Karachi	
2023	BS Computer Science	Bahria University	
2018	Intermediate	Punjab College	A1 Grade

Relevant Coursework

Object-Oriented Programming, Data Structures & Algorithms, Operating Systems, Database Management Systems, Software Engineering, Computer Networks, Artificial Intelligence, Information Security and Web development

Professional Experience

AI Lead & Data Scientist

Poulta, Inc.

Aug 2024 - Present
Karachi, Pakistan (Remote)

- Own the design and delivery of the AI platform: authored the backend and multi-agent architecture, lead the AI team, run architecture reviews, and present to the CEO, leadership, and board.
- Designed a role-scoped multi-agent LLM layer, auto-scoped by the org tree so each role sees only its own slice of the data, with a deterministic scope guard and agents that narrate only real, tool-computed figures.
- Built a multi-tenant control plane that provisions each company as an isolated cell with its own database, encryption key, and network, so onboarding a tenant is a provisioning step, not a rebuild.
- Designed the AI gateway with a fallback chain so an AI incident degrades the assistant without taking down dashboards, data, or alerting.
- Implemented PII redaction, append-only audit logging, SSO with two-factor sign-in, and role-based access enforced server-side, across two availability zones.
- Developed forecasting and predictive models to support performance analysis and proactive, data-driven decision-making.
- Built and maintained interactive KPI dashboards in Qlik Sense, turning farm and production data (mortality, FCR, feed, flock performance) into actionable insights for operations teams.
- Integrated and reconciled large datasets from multiple source systems through cloud data workflows, and used SQL extensively for extraction, transformation, and analysis with operations and management.

AI/ML Engineer

MID Construction

Feb 2025 - Oct 2025
USA (Remote)

- Developed and deployed computer vision models for real-time hazard detection on construction sites using YOLO and other deep learning architectures.
- Built image and video processing pipelines to monitor safety compliance and detect anomalies from site surveillance data.
- Integrated AI models into functional applications using FastAPI for backend services and Streamlit for interactive dashboards and demos.
- Enhanced site safety by automating risk detection and alerting, improving response time and reducing manual monitoring effort.

Digital Marketing Head

ZKAAH Organics

Jan 2025 - Present
Karachi, Pakistan

- Led branding, product packaging, and social media strategy, and built and maintained the company website.
- Oversaw online sales and e-commerce operations, tracking performance and implementing strategies to increase revenue.

Data Science | Web Developer | Graphic Design

Freelance

Jan 2019 – Jan 2024

- Completed Data Science and Machine Learning projects in Python using Pandas, NumPy, Scikit-learn, and Matplotlib for analysis, visualization, and predictive modelling.
- Designed and developed modern, responsive websites using HTML, CSS, JavaScript, and modern frameworks.
- Delivered graphic design work for branding and digital content and built Digital Logic Design (DLD) projects.

Major Projects

- **Multi-Tenant Multi-Agent AI Platform (Agentic AI)** – architecture owner. Role-scoped LLM agents answer operational questions and run routine multi-step workflows across multiple business segments, behind one login and a control plane over isolated per-company cells, with grounded tools, PII redaction, and full audit.
- **Hazard Detection System (Computer Vision)** – real-time system using YOLO and deep learning to detect safety hazards from live video feeds and raise automated alerts, served via FastAPI and Streamlit.
- **Age Estimation System (ML)** – deep-learning model predicting a person’s age from facial images, covering preprocessing, training, and evaluation in Python.
- **Hurdle Avoiding Four-Wheel Bot (Final Year Project)** – autonomous four-wheel robot avoiding obstacles in real time using a neural network trained on sensor data.
- **Additional builds** – forecasting models for farm and flock performance; full-stack e-commerce website; and desktop Pharmacy and Hospital Management Systems backed by relational databases.

Technical Skills

- | | | | | |
|-----------------------|--------------------------|-------------------|-----------------|---------------|
| • Multi-Agent Systems | • LLM Agents | • Qlik Sense | • KPI Reporting | • Python |
| • Prompt Scoping | • Grounded Generation | • Amazon Bedrock | • FastAPI | • AWS |
| • Multi-Tenancy | • RBAC / SSO | • PII Redaction | • SQL | • MongoDB |
| • Machine Learning | • Deep Learning | • Computer Vision | • Scikit-Learn | • Forecasting |
| • Agent Orchestration | • ETL / Data Integration | • Audit Logging | • Tableau | • N8n |
